

## I CLAIM

1. A shock-absorbing device for a golf club head.  
comprising:

5 A front recess provided inside the striking face of  
a golf-club head, said front recess extending to a top and  
a rear portion of said striking face and communicating  
with a rear recess by means of plural through holes: and,

10 A metal face plate mounted on said front recess,  
said metal face plate having dented portion around its  
circumferential edge fixedly engaged with said striking  
face synchronously when shock-absorbing material is  
formed into shape and affixed to said front and rear  
recesses, forming a double-deck layer, effectively  
15 absorbing wrenching and shock force in hitting a golf  
ball so as to absorb and lessen shock and control a golf  
ball.

2. The shock-absorbing device for a golf-club head  
as claimed in Claim 1, wherein said shock-absorbing  
material is of thermoplastic elastomers:

20 3. The shock-absorbing device for a golf-club head  
as claimed in Claim 1, wherein said shock-absorbing  
material is of pure rubber material.
